

Pressure Control Lubricator Services

Service Description:

The Pressure Control Lubricator, sometimes called a “Polished Rod Lubricator” is an essential tool for the running and retrieval of Back Pressure Valves (BPV’s) and Two-Way Check Valves (TWCV’s).

These valves are set in the tubing hanger preparation and are an integral part of the production tubing isolation envelope for Xmas Tree removal or any barrier intrusive work on the master valves of the Xmas tree.

Key Uses and Benefits:

- Allows Pressure test of Xmas Tree
- Can be used as second barrier for Xmas Tree work above Lower Master Valve
- Nipple up/down of BOP
- Based in Perth, Western Australia

PCL Specifications:

- 10,0000 psi Rated
- 2” Weco 1502 union connection
- 118” (3 m) Stroke
- NACE Trim
- Stainless Steel Polished Rod

ACC Corporate’s Experience is Your Asset:

ACC Corporate has been involved in well integrity since 1992. Our highly skilled field service engineers will come equipped to install the BPV/TWCV isolation in the best possible time, and with safety as our number one concern.
